

**City of Philadelphia
Department of Aviation
Carbon Management Statement
2024**

The Philadelphia Department of Aviation (the Airport) strives to operate as a world class global gateway that contributes to the social, economic and environmental well-being of the Philadelphia region.

The Airport seeks to be a leader in sustainability and carbon management, and is committed to minimizing contribution to climate change, and has established the following ambitious goals to measure progress:

- 30% reduction of fossil fuel use by 2030
- 20% reduction in PHL Energy Use Intensity by 2030
- Generate or purchase 100% renewable energy by 2030
- Carbon neutrality for all Scope 1 emissions by 2050

To achieve these goals, the following emission reduction efforts are being pursued at Philadelphia International (PHL) and Northeast Philadelphia (PNE) airports:

- Energy efficient upgrades of airport-owned facilities and infrastructure
 - Electrification of the airport and tenant vehicle fleets
- Sustainable design, including LEED and Envision certifications where relevant, for all capital projects
 - Generation of renewable energy including solar and geothermal projects
 - Exploration of sustainable fuel accessibility for vehicles and aircraft

Together with tenants, staff, passengers, City leadership and community stakeholders, the Airport is working to instill sustainability and resilience throughout airport development and operations, and to manage our carbon emissions in pursuit of a cleaner, greener city and region.

Date: 06/13/2024

Atif Saeed, A.A.E., IAP

Chief Executive Officer
Philadelphia Department of Aviation

The baseline year for all percentage goals is 2016.
